

# End Suction Multistage Pumps

## DanPumps S-EMP (DN 40 - DN 150 mm)

### Product Applications

The DanPumps S-EMP pump is designed for clean or slightly contaminated low viscosity liquids without solid and fibrous particles.

### Technical data

Discharge Flange	DN 40 - DN 150 mm
Capacity	up to 400 m <sup>3</sup> /h
Head	up to 450 m
Speed	up to 3000 rpm
Design Temperature	-10° C to +140° C*
Casing Pressure (Pmax <sup>**</sup> )	30 bar (63 bar) <sup>†</sup>

\* The Material of pumps differ according to the type of pumped liquid, operating temperature and pressure. Contact for detailed information.

\*\* Pmax: Suction Pressure + Shut off Head

### Pump Designation

**S-EMP** / **100** / **6**  
Pump type      Discharge Nozzle (DN-mm)      Number of Stages

### Design Features:

- Horizontal ring section, multistage, centrifugal pumps with closed impellers and diffusers in end suction design.
- 7 Models from DN 40 up to DN 150 discharge flange diameter.
- Suction nozzle flanges conform to EN 1092 - 2/PN 16 and discharge nozzle flanges conform to EN 1092 - 2/PN 40 (PN 63) (For steel or stainless steel casing pumps, flanges conform to related pressure class ratings defined in EN 1092 - 1).
- Discharge flange is on top for standard production, upon request different discharge flange positions can be applied.
- All impellers are balanced dynamically or statically according to ISO 1940 class 6.3.
- Axial thrust is balanced by impeller balancing holes system.
- Direction of rotation is always counter clockwise viewed from drive end. That is why these pumps can not be accoupled directly with diesel engines.
- Bearings of S-EMP type pumps are grease lubricated. Journal bearing used in the suction side is lubricated by the pumping liquid.

### Shaft Sealing

- The standard shaft seal is a mechanical Carbon/Silicon carbide with EPDM.
- Different seal variants are available depending on customer request and liquid type.
